

SAVA CENTAR, SERBIA

Objectives

A business center intended for various multifunctional activities, the Sava Centar offers a space to accommodate up to 3,800 people.

After undergoing a thorough reconstruction which has lasted more than two years, the addition of fire suppression equipment as a precaution should a fire occur to protect both the building and the lives anyone inside.

Solution

Rapidrop supplied a variety of products to the project including our range of Made In Britain approved quick response sprinkler heads in both SSU and SSP, as well as a range of other sprinkler heads including our side wall sprinkler and our concealed sprinkler heads.

We also ensured that the pump was well equipped with our products including the use of our range of valves, including the wet alarm valve, butterfly valve, NRS gate valve and many more.

At a Glance

The Sava Centar, located in Belgrade, Serbia, is a multifunctional congress, cultural, and business center.

Constructed between 1976 and 1979, it features the largest congress space in Southeast Europe, including the notable "Blue Hall" with a capacity of 3,800 people.
