

PROGROUP STRYKÓW, POLAND

Objectives

As part of the Progroup growth strategy, they began construction of their plant in Stryków, Poland, in 2021. Covering an area of 27,900 square meters.

With the warehouse facility containing containerboard as well as corrugated sheetboard, the requirement for fire suppression equipment became essential.

Solution

15.000 pieces of RD043 K115 sprinklers equipped with RDGD01 guard and RDBF02 watershield.

The guard and watershield is FM approved when used with the RD043 sprinkler. The watershield in such applications is used to prevent sprinkler from the lower layer to be flushed and chilled by water discharged from sprinklers from the upper levels, which may delay activation of the sprinkler head placed below.

The guards are used to protect the sprinkler from any physical damages that may happen if the sprinkler is hit or accidentally knocked.

At a Glance

The provision of fire sprinklers to a factory of containerboard and corrugated sheetboard, which was built in 2021/2022.

Products

In rack system with RD043 K115 sprinklers equipped with RDGD01 guard and RDBF02 watershield.
