

GLP MAGNICE, POLAND

Overview

The warehouse park in Magnice, part of the Wrocław metropolitan area, is one of Poland's largest logistics projects.

Objectives

Building a large warehouse unit as part of Poland's largest logistics projects, GLP factored in the potential of fire risks that could arise depending on what the warehouse would be used for.

Solution

GLP opted to include a selection of Rapidrop valves including 29 of our wet alarm valve. Wet alarm valves in fire safety systems detect water flow when a sprinkler is activated, triggering alarms to notify occupants and emergency personnel. They ensure the system remains pressurized, providing immediate water availability to extinguish fires.

At a Glance

The warehouse park in Magnice is one of Poland's largest logistics projects. They offer space to rent for those in the distribution, storage and production industries.

Products

- Grooved couplings
- Butterfly valves RD216
- PIV Gate valves RD104
- Check valves RD301
- Wet alarm valves
